NOW OFFERING

## MODEL 1000 OVERDRIVE

The Mitchell "Model 1000" Overdrive is a totally new, tested and proven 2 speed synchromesh overdrive transmission. It is small, compact and easily adaptable to "Ford V-8s."

**Precision built in America** of the finest alloys and workmanship, assuring you of a quiet, easy shifting and dependable unit to make your driving a pleasure.

For the "Ford V-8" the installation kit includes new front and rear torque tubes, drive lines, speedo cable extension and gear, shifter and linkage, or cable shift.

Our overdrive transmission offers many important benefits to older cars that are geared low.

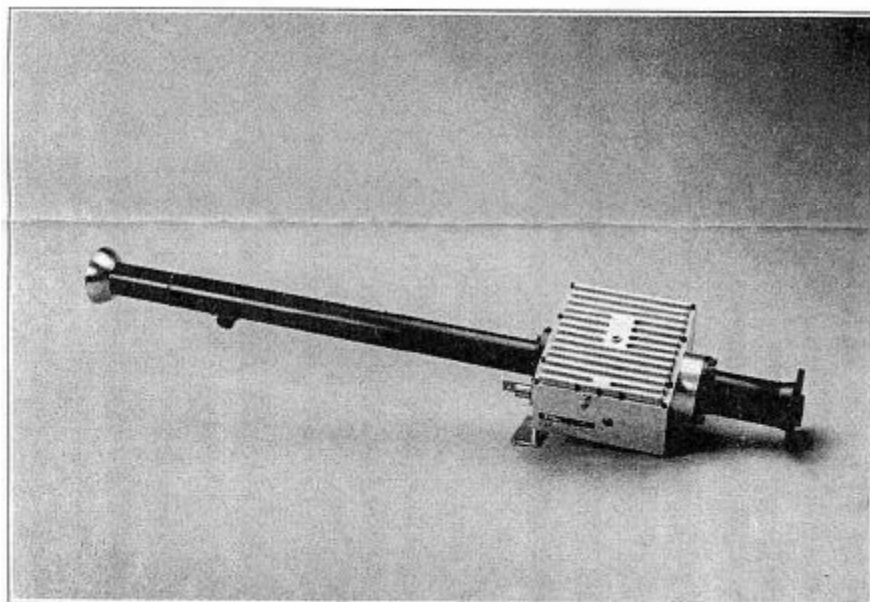

With RPM reduction of approximately 500-600 (at 55 mph) our 26% overdrive allows a comfortable Highway cruising speed.

Not just an overdrive, with the synchromesh shifting feature, any gear can be split at any speed, giving you six forward gears instead of three. Shifting is manual with either a separate shift stick, easily floor mounted in the cab next to the standard stick, or option of cable shift.

Overdrive mounts to the rear of the vehicle, short torque tube adaptor and sleeve attaches unit to banjo. New torque tubes and drive lines are provided for easy installation.

Speedometer and odometer are read from the overdrive after it is installed, speedo cable extension and gear are part of the installation kit.

***A two year warranty  
will apply to transmission.***

Complete installation instructions are included with overdrive.
